Summer 2018

Pearson Edexcel International GCSE In Further Pure Mathematics (4PM0) Paper 01

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at <u>www.edexcel.com</u>.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

www.edexcel.com/contactus

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- Types of mark
 - o M marks: method marks
 - A marks: accuracy marks
 - B marks: unconditional accuracy marks (independent of M marks)

Abbreviations

- cao correct answer only
- o ft follow through
- o isw ignore subsequent working
- o SC special case
- oe or equivalent (and appropriate)
- o dep dependent
- o indep independent
- o eeoo each error or omission

No working

If no working is shown then correct answers may score full marks If no working is shown then incorrect (even though nearly correct) answers score no marks.

With working

Always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

Any case of suspected misread loses 2A (or B) marks on that part, but can gain the M marks.

If working is crossed out and still legible, then it should be given any appropriate marks, as long as it has not been replaced by alternative work.

Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.

• Parts of questions

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded in another.

General Principles for Further Pure Mathematics Marking

(but note that specific mark schemes may sometimes override these general principles)

Method mark for solving a 3 term quadratic equation:

1. Factorisation:

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where $|pq| = |c|$ leading to $x = ...$
 $(ax^2 + bx + c) = (mx + p)(nx + q)$ where $|pq| = |c|$ and $|mn| = |a|$ leading to $x = ...$

2. Formula:

Attempt to use the **correct** formula (shown explicitly or implied by working) with values for *a*, *b* and *c*, leading to x = ...

3. <u>Completing the square:</u>

 $x^{2} + bx + c = 0$: $(x \pm \frac{b}{2})^{2} \pm q \pm c = 0$, $q \neq 0$ leading to x = ...

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. $(x^n \rightarrow x^{n-1})$

2. Integration:

Power of at least one term increased by 1. $(x^n \rightarrow x^{n+1})$

Use of a formula:

Generally, the method mark is gained by either

quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values

or, where the formula is <u>not</u> quoted, the method mark can be gained by implication from the substitution of <u>correct</u> values and then proceeding to a solution.

Answers without working:

The rubric states "Without sufficient working, correct answers may be awarded no marks".

General policy is that if it could be done "in your head" detailed working would not be required. (Mark schemes may override this eg in a case of "prove or show...."

Exact answers:

When a question demands an exact answer, all the working must also be exact. Once a candidate loses exactness by resorting to decimals the exactness cannot be regained.

Rounding answers (where accuracy is specified in the question)

Penalise only once per question for failing to round as instructed - ie giving more digits in the answers. Answers with fewer digits are automatically incorrect, but the isw rule may allow the mark to be awarded before the final answer is given.

|----------------|----|--|-----------------------------|
| Questi numb | | Scheme | Marks |
| 1 (a |) | $\frac{1}{2} \times 10^2 \theta = 25$ | M1 |
| | | $\theta = \frac{1}{2}$ | A1 [2] |
| (b) | | arc length $= r\theta = 10 \times \frac{1}{2} = 5$ (cm) | M1A1 [2] |
| | | Τα | tal 4 marks |
| | | Notes | |
| (a) | M | Uses correct formula for area of a sector $A = \frac{1}{2}r^2\theta$ or rearranged to give | $e \theta = \frac{2A}{r^2}$ |
| | | with fully correct substitution to obtain a value for θ | |
| | A1 | $\theta = \frac{1}{2}$ or 0.5 in radians accept any equivalent fraction e.g. $\frac{50}{100}$ | |
| (b) | M | | eve a value |
| | | for <i>l</i> . Accept only $r = 10$ cm and their value for θ | |
| | | 2nd Method Uses the formula $l = \frac{2A}{r} \Rightarrow l = \frac{2 \times 25}{10} = (5)$ Accept only of | correct |
| | | values for <i>r</i> and <i>A</i> . | |
| | A1 | | |
| | | rks in degrees | |
| (a) | M | Uses correct formula for area of a sector $A = \pi r^2 \frac{\theta^\circ}{360^\circ}$ AND attempts t | to convert |
| | | their angle (28.647°) correctly into radians $\frac{28.647° \times \pi}{180}$ (0.167) | τ) |
| | A1 | $\theta = \frac{1}{2}$ or 0.5 accept any equivalent fraction e.g. $\frac{50}{100}$ | |
| | | Accept 0.499 or better | |
| (b) | M | Use the correct formula $l = 2\pi r \frac{\theta^{\circ}}{360^{\circ}}$ with their angle in degrees to find | d a |
| | | value for <i>l</i> | |
| | A1 | | |
| | | Το | tal 4 marks |

| Question number | Scheme | Marks |
|--------------------|--|------------------|
| 2 | $\alpha + \beta = \frac{5}{3}, \ \alpha \beta = \frac{4}{3}$ | B1 |
| | $\alpha + \frac{1}{2\beta} + \beta + \frac{1}{2\alpha} = \alpha + \beta + \frac{\alpha + \beta}{2\alpha\beta}, = \frac{5}{3} + \frac{\frac{5}{3}}{\frac{8}{2}} = \frac{55}{24}$ | M1,A1 |
| | $\left(\alpha + \frac{1}{2\beta}\right)\left(\beta + \frac{1}{2\alpha}\right) = \alpha\beta + \frac{1}{2} + \frac{1}{2} + \frac{1}{4\alpha\beta}, = \frac{4}{3} + 1 + \frac{3}{16} = \frac{121}{48}$ | M1,A1 |
| | $x^2 - \frac{55}{24}x + \frac{121}{48} (=0)$ | M1 |
| | $48x^2 - 110x + 121 = 0$ | A1 [7] |
| | Τα | tal 7 marks |
| | Notes | |
| B1 | For both correct values of the sum and product. | |
| M1 | For the correct algebra for the SUM. They must reach | |
| | $\alpha + \beta + \frac{(\alpha + \beta)}{2\alpha\beta}$ or $\left[\alpha + \beta + \frac{2(\alpha + \beta)}{4\alpha\beta}\right]$ | |
| | or $\frac{2\alpha\beta(\alpha+\beta)+(\alpha+\beta)}{2\alpha\beta}$ or $\frac{(\alpha+\beta)(2\alpha\beta+1)}{2\alpha\beta}$ | |
| | Their correct expression for the sum must be such as to substitute $\alpha + \beta$ ard directly in. | nd $\alpha\beta$ |
| A 1 | Substitute in their values for $\alpha + \beta$ and $\alpha\beta$. | |
| A1 | $Sum = \frac{55}{24}$ | |
| M1 | For the correct algebra for the PRODUCT. | |
| | They must reach $\alpha\beta + \frac{1}{2} + \frac{1}{2} + \frac{1}{4\alpha\beta}$ or $\frac{(2\alpha\beta + 1)^2}{4\alpha\beta}$ | |
| | Their correct expression for the product must be such as to substitute $\alpha\beta$ d | lirectly in |
| | Substitute in their values for $\alpha\beta$. | |
| A1 | $Product = \frac{121}{48}$ | |
| M1 | Use their SUM and PRODUCT correctly in a quadratic equation. | |
| | $x^{2} + (-\text{their sum})x + (\text{their product}) (= 0)$ | |
| A1 | $48x^2 - 110x + 121 = 0$ oe for example $96x^2 - 220x + 242 = 0$ Must be integer values only. | |
| | | |

| Questi numb | | Scheme | Marks |
|----------------|----|--|-----------------------------------|
| 3 (a) | | $\frac{\sin C}{12} = \frac{\sin 42^{\circ}}{9}$ | M1A1 |
| | | $C = 63.14^{\circ}$ 116.85° | A1 |
| | | $\angle ABC = 180 - ("C" + 42)$ | M1A1 |
| | | | [5] |
| (b) | | $B = 180 - ("C"+42), \qquad B = 74.9^{\circ} 21.1^{\circ} \text{ (Accept 21.2^{\circ})}$ Area = $\frac{1}{2} \times 12 \times 9 \sin "B", = \frac{1}{2} \times 12 \times 9 \sin 21.1^{\circ}$ = 19 or 20 (cm ²) | M1,A1 (smaller angle) A1 |
| | | Тс | otal 8 marks |
| | | Notes | |
| (a) | M1 | Uses Sine Rule either way around with correct values and achieves a value angle in degrees. (Not just the sine of the angle) | ue for an |
| - | A1 | For either $C = 63.1^{\circ} - 63.2^{\circ} OR C = 116.8^{\circ} - 116.9^{\circ}$ | |
| | A1 | For $C = 63.1^{\circ} - 61.2^{\circ} AND C = 116.8^{\circ} - 116.9^{\circ}$ | |
| | M1 | For $\angle ABC = 180 - ("C"+42)$ to achieve at least one value for $\angle ABC$ | 2 |
| | A1 | $\angle ABC = 74.9^{\circ}$ AND 21.1° both required rounded correctly (Acc | ept 21.2°) |
| (b) | M1 | For a correct expression for the area. They must use the appropriate angle correct lengths. For example; 9cm, 12 cm with their angle <i>B</i> (even if it is but identified as their angle <i>B</i>). If they do not have an angle <i>B</i> and use lengths 9 cm and 12cm, award M0 If they only have one value for angle <i>B</i>, allow this mark. isw extra attempts after a correct method seen. | s incorrect |
| | A1 | For using 21.1° or 21.2° only | |
| | A1 | Area = 19 or 20 (cm ²) accept this for full marks even if area of 52 (cm ²) well. | ²) is seen as |

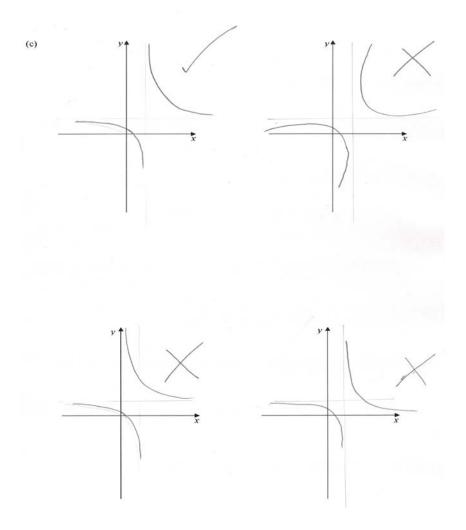

Rounding: Please read the notes carefully on rounding in General Guidance

| Questi numb | | Scheme | Marks |
|----------------|------|--|---------------|
| 4 (a) | (i) | $x - \frac{1}{2x^2} = \frac{2x^3 - 1}{2x^2}$ | B1 |
| | (ii) | $x = \sqrt[3]{0.5} \implies 2x^3 = 1 \implies y = 0, x \approx 0.8$ | M1,A1 [3] |
| (b) | | $x = \sqrt[3]{0.5} \implies 2x^3 = 1 \implies y = 0, x \approx 0.8$ $4 - 2x + \frac{1}{2x^2} = 0 x - \frac{1}{2x^2} = 4 - x$ | M1 |
| | | Draw $y = 4 - x$, $x = 2.1$ or 2.0 | dM1,A1 [3] |
| | | To | tal 6 marks |
| (a) (i) | B1 | Correct fraction only $\frac{2x^3-1}{2x^2}$ Award when seen, and isw any attempts | to simplify. |
| (ii) | M1 | Substitutes $x = \sqrt[3]{0.5}$ into $y = \frac{2x^3 - 1}{2x^2} \Rightarrow y = \frac{2(\sqrt[3]{0.5})^3 - 1}{2(\sqrt[3]{0.5})^2} = \frac{11 - 1}{2(\sqrt[3]{0.5})^2}$ | (=0) |
| | | and uses the graph to write a value for x for their value of y. If there is no working with just an answer given here - M0 Minimum working we need to see; $y = 0 \Rightarrow x \approx 0.8$ or $y = 0 \Rightarrow x = 0.8$ | |
| | A1 | x = 0.8 only. More digits implies a calculator answer so is A0. | |
| (b) | M1 | For attempting to achieve a minimum of $x - \frac{1}{2x^2} = \pm 4 \pm x$ | |
| | dM | Draws their line correctly. Coordinates of the correct line are $(0, 4)$ $(1, 3)$ $(2,2)$ $(3, 1)$, $(4, 0)$ and identifies a value of <i>x</i> for their intersection. | |
| | A1 | For either $x = 2.1$ or 2.0 only | |

| Questio number | | Scheme | Marks |
|-------------------|------------|--|---------------|
| 5 (a) (i) | $\int (3)$ | $-x + \frac{1}{x^{3}} dx = 3x - \frac{1}{2}x^{2} - \frac{1}{2x^{2}}(+c) \qquad \left(\frac{1}{2}x^{-2} \text{ or } \frac{1}{2x^{2}}\right)$ | M1A1 |
| (ii | | $\left[-\frac{1}{2}x^{2}-\frac{1}{2x^{2}}\right]_{1}^{2} = 6-2-\frac{1}{8}-\left(3-\frac{1}{2}-\frac{1}{2}\right)=1\frac{7}{8} (\text{or } 1.875)$ | M1A1 [4] |
| (b) (i) | ∫6si | $\sin 3x \mathrm{d}x = -2\cos 3x (+c)$ | M1A1 |
| (ii) | [-20 | $\cos 3x \Big]_{\frac{\pi}{9}}^{\frac{\pi}{6}} = -2\cos\frac{\pi}{2} + 2\cos\frac{\pi}{3}, = 1$ | dM1,A1 [4] |
| | | | tal 8 marks |
| | | Notes | |
| (a)(i) | M1 | $x^{-3} \Rightarrow kx^{-2}$ and one of $3 \Rightarrow 3x$ or $-x \Rightarrow -kx^2$ | |
| | A1 | Fully correct integrated expression. Condone a missing $(+c)$ Ignore spurious integral signs. | |
| (ii) | M1 | Substitutes 2 and 1 into their integrated expression (at least one term and subtracts the correct way around and reaches a value for the integrated expression. | |
| | A1 | For $1\frac{7}{8}$ or equivalent fraction or 1.875 | |
| (b)(i) | M1 | Attempts to integrate the expression. Accept as a minimum $\sin 3x \Rightarrow -k \cos 3x$ $k \neq \pm 1, \pm 3$ or $0 \pm 18 \cos 3x$ or $\pm 6 \cos 3x$ are M0 | |
| | A1 | For $-2\cos 3x(+c)$ Condone a missing $(+c)$ Ignore spurious integral signs. | |
| (ii) | dM1 | Substitutes $\frac{\pi}{6}$ and $\frac{\pi}{9}$ into their integrated expression and subtract | ets the |
| | | correct way around and reaches a value for the integrated expression. | |
| | A1 | For 1 | |

| | x = 1.8037 = 1.804 | A1 [3] |
| | Tot | al 14 marks |

In this question penalise ROUNDING of angles only once in parts (c) and (d).

This applies only if both answers are correct but over-accurate, i.e. they would both round to the correct angle to 1 decimal place. For example; for an angle in (c) given as 59.04° award M1A1A0, but if the angle in (d) is then given as 73.74° do not penalise the angle in (d), and award M1A1A1.

If however the answer given in (c) is 59° without 59.04° seen, this is M1A1A0, and because it is under-accurate, if they then give the angle in (d) as 73.74° , then this is awarded M1A1A0 as well.

| | | Notes |
|---|------|--|
| (a) B1 For using Pythagoras theorem to find either $AC = 20x$ or $AX = 10x$ | | |
| | | Do not accept $AC = 20$ or $AX = 10$ |
| | M1 | For $EX = AX \tan 45^\circ = (10x)$ |
| | 1011 | For $LX = AX$ tan $+5^{\circ} = (10x)^{\circ}$ Ft their AX but not if they use their AC |
| | | If there is no x in their working it is M0 UNLESS they put x into their final answer. |
| | A1 | For 10x |
| ALT | | |
| | M1 | Triangle AEC is isosceles with $\angle EAX = \angle ECX = 45^{\circ}$ |
| | | Hence triangle AEX is also isosceles with $\angle EAX = \angle AEX = 45^{\circ}$ |
| | | Thence utalight AEA is also isosceles with $\angle EAA - \angle AEA - 45$ |
| | | If there is no x in their working it is M0 UNLESS they put x into their final answer. |
| | A1 | Hence $AX = EX$ so $EX = 10x$ |
| Accep | | 10x just stated without working. |
| (b) | M1 | Uses Pythagoras theorem or any acceptable trigonometry to find length AE |
| | | je og de se |

| | A1 | denominator only. Uses the correct value for AX |
| | A1 | $\angle AXD = 73.7^{\circ}$ (must be acute) |
| | | Note: Do not isw if both angles are given and the acute angle not identified. |
| (e) | M1 | Finds the length of E to the midpoint of $AD(Y)$ |
| | | $EY = x\sqrt{(10\sqrt{2})^2 - 6^2} (= x\sqrt{164} \text{ or } 2x\sqrt{41})$ ft their AE |
| | | Any working without <i>x</i> is M0. |
| | M1 | Equates area of 250 cm ² to $\frac{1}{2} \times AD \times EY = \frac{1}{2} \times 12x \times x\sqrt{164} \Rightarrow x =$ |
| | | Equates area of 250 cm ² to $- \times AD \times EY = - \times 12x \times x\sqrt{164} \Rightarrow x =$ |
| | A1 | x = 1.804 rounded correctly |
| ALT | cosine ri | alle and $\frac{1}{ab} \sin C$ |
| | I | 2 |
| (e) | M1 | Finds angle AED |
| | | $\left(\left(10\sqrt{2}x^{\prime}\right)^{2}+\left(10\sqrt{2}x^{\prime}\right)^{2}-\left(12x^{\prime}\right)^{2}\right)$ |
| | | $\angle AED = \cos^{-1} \left(\frac{\left('10\sqrt{2}x' \right)^2 + \left('10\sqrt{2}x' \right)^2 - (12x)^2}{2 \times \left('10\sqrt{2}x' \right) \times \left('10\sqrt{2}x' \right)} \right) = 50.208^{\circ}$ |
| | | $\left(\begin{array}{c}2\times(10\sqrt{2}x')\times(10\sqrt{2}x')\end{array}\right)$ |
| | | Any working without <i>x</i> is M0. |
| | M1 | Equates area of 250 cm^2 to expression for area of triangle: |
| | | $250 = \frac{1}{2} \times AE \times ED \sin \angle AED = \frac{1}{2} \times 10\sqrt{2}x \times 10\sqrt{2}x \sin 50.208^{\circ} \Rightarrow x^{2} = 3.2536^{\circ}$ |
| | | $2 \xrightarrow{2} 2 \xrightarrow{2} $ |
| | | $\Rightarrow x = 1.8037$ |
| | A1 | x = 1.804 rounded correctly |
