Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
 - there may be more space than you need.
- Calculators may be used.

Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.
- Without sufficient working, correct answers may be awarded no marks.

22 A particle P is moving along a straight line. At time t seconds ($t \ge 0$), the displacement, s metres, of P from a fixed point O of the line is given by

$$s = \frac{5}{3}t^3 - \frac{9}{2}t^2 - 2t$$

At time t seconds, the velocity of P is v m/s.

(a) Find an expression for v in terms of t.

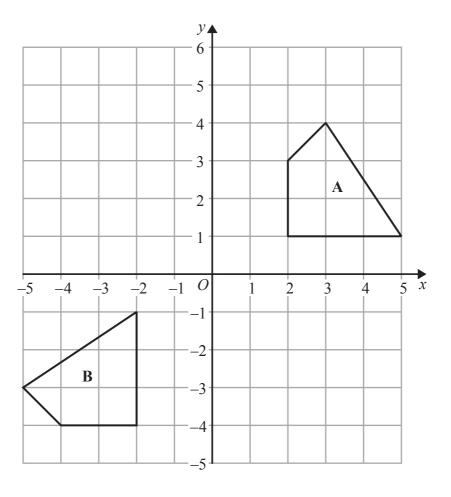

(b) Find the value of t when P is instantaneously at rest.

$$t = \dots$$

Quadrilateral $\bf A$ is transformed to quadrilateral $\bf B$ by an anticlockwise rotation about the origin followed by a translation.

(a) Write down the angle of rotation.

(1)

(b) Find the 2×2 matrix which represents this rotation.

(2)

(c) Find the column vector which represents the translation.
